

**Description & skills:**

Frontend developer with extensive 11 years of experience and good understanding of related areas such as backend and design. I have worked on various types of websites and web applications. My core skills include **HTML, CSS with preprocessors and UI libs, Git, Javascript, Typescript, react.js, react-native, redux, CSS-in-JS tools, Svelte, Three.js, AI tools and APIs**. My key focus is on code maintainability/extendability.

**Experience:**

|                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                   |

| <i>Typescript, react.js, react-native, firebase, nodejs</i>                                                                                                                                                                                                                                                                                                                                                          |                                                                   |
| Updated core modules of the web and react-native apps with new functionality(Sign In Flow, Messaging, multiple minor upgrades & code enhancement).                                                                                                                                                                                                                                                                   |                                                                   |
| <b>04.2021 – 09.2023</b>                                                                                                                                                                                                                                                                                                                                                                                             | Onomy Protocol: Lead Front End Developer                          |
| <i>Typescript, react.js, styled-components, D3.js</i>                                                                                                                                                                                                                                                                                                                                                                |                                                                   |
| Developed responsive frontend from scratch for a presale token platform, web wallet, exchange, governance, bridge and other services within the web3 ecosystem.<br><u>This allowed the team to acquire \$11M+ of investments.</u>                                                                                                                                                                                    |                                                                   |
| <b>06.2017 – 04.2021</b>                                                                                                                                                                                                                                                                                                                                                                                             | BetterLegal: Front End Developer > Lead Developer                 |
| <i>Typescript, nextjs, react.js, redux, redux-saga, styled-components, WebSocket, Stripe API</i>                                                                                                                                                                                                                                                                                                                     |                                                                   |
| Solely developed a complete frontend for an internal CRM system that has given a possibility for managers to work with organizational data in real-time. Developed multiple company websites from landing pages to complex multi-form customer pages, integrated third-party services like Stripe payments, Zapier hooks, detailed analytics, etc. <u>As a result company services sales grew in multiple times.</u> |                                                                   |
| <b>09.2014 – 06.2017</b>                                                                                                                                                                                                                                                                                                                                                                                             | Various small to large-size freelance projects                    |
| <i>HTML, CSS, angular.js 1.x, knockout.js, ember.js, react.js, vue.js, WordPress, Webflow, jQuery &amp; more</i>                                                                                                                                                                                                                                                                                                     |                                                                   |
| Completed more than <b>30~ projects</b> including corporate websites, landing pages, UI for Electron-based video editing software, social media websites, email HTML templates, custom WordPress themes, Webflow websites, etc.                                                                                                                                                                                      |                                                                   |

**Education:**

|                    |                                                                                                                                |
|--------------------|--------------------------------------------------------------------------------------------------------------------------------|
| <b>2010 – 2015</b> | Master's Degree in Information Security, Institution of IT and Control Systems, Belgorod State Tecnological University, Russia |
| <b>2012 – 2015</b> | Self-education with literature & online-platforms: Codeacademy, Coursera, Udemy, etc.                                          |

**Other experience:**

|                    |                                                                                                                                                                            |
|--------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>2008 – 2014</b> | Worked as a part-time web-designer, completed <b>around 120</b> freelance projects, including banners, website design, illustrations, pixel-art illustrations for gamedev. |
| <b>2012 – 2014</b> | PHP, Python, Ruby (& Ruby on Rails) non-commercial development.                                                                                                            |
